Namaratha Karanth

Data Analyst

T: 8618466437 **E:** karanthnamaratha@gmail.com **A:** Bangalore, India

LinkedIn | Portfolio

PROFESSIONAL SUMMARY:

DaData Analyst with 2+ years of experience in data analysis, automation, and financial reporting across enterprise environments. Skilled in SQL, Python, Power Query, Power BI, and Advanced Excel, with hands-on experience in data validation, reconciliation, and reporting. Delivered analytics automation across 36+ commercial and non-profit clients, including a cash flow reporting process where a core processing step was reduced by up to 90% in execution time. Experienced in translating business requirements into reliable data and automation solutions, with additional project experience in e-commerce funnel analysis, experimentation, and marketplace analytics.

TECHNICAL SKILLS:

Data Analysis

- SQL (joins, aggregations, validation)
- Python
- Pandas
- EDA
- Excel (advanced formulas, Pivot Tables)
- Google Sheets
- Data Validation & Reconciliation

Data Cleaning & Transformation

- ETL
- Power Query

Data Visualization & BI

- Power BI (DAX, interactive dashboards)
- Matplotlib

AI & Automation

- Prompt Engineering
- Power Automate
- n8n

Tools & Workflow

- Jira
- Google Colab

WORK EXPERIENCE:

Software Engineer L1 | Digital Transformation & Innovation **Mar 2024 to Jul 2025**

Consero Global Solutions — Bangalore, India

- Automated the **core data-processing step of cash flow reporting** using Power Automate and Power Query, reducing execution time by **up to 90%** (1–3 hours to 6–30 minutes) for that step, depending on data volume.
- Delivered analytics automation and financial reporting solutions across **36+ commercial and non-profit clients**, contributing to process improvements equivalent to **10+ FTE in labor savings**.
- Identified that a **Power Automate-only approach would be slower than the manual process at scale**; redesigned the solution using reusable Power Query templates integrated into the bot configuration, reducing execution time from **45 minutes to ~30 seconds** across **800–15,000+ row datasets**.
- **Built Cash Flow Process Automation V0** — the company's **first financial process automation prototype** — as one of a three-person team over a weekend; the prototype was presented to international leadership and the work was recognized with the **Transformation Excellence Award**.

- Built the bank statement processing component of Cash Flow Process Automation, standardizing **50+ statement formats** into consistent, **BI-ready datasets** to support downstream reporting, reconciliation, and analytics.
- **Investigated and resolved data discrepancies** across bank statements, AP/AR records, and source systems, **tracing unexpected variances to their root causes** and implementing appropriate fixes to improve reporting reliability.
- Managed automation onboarding for **50+ stakeholders**, evaluating **client-specific processes against bot capabilities**, defining **input standards**, and escalating misalignments as needed to support adoption.
- **Identified misalignments** between production outcomes and operational requirements during development, then **worked with Business Analysts** to refine business rules and **redesign automation logic** — improving **automation accuracy and process reliability**.

Data Analyst — Sep 2021 to Sep 2022

_VOIS (Vodafone) — Pune, India | Remote

- Supported **SQL-based data analysis and data migration**, writing joins, aggregations, validation queries, and optimizing SQL to extract, reconcile, and verify datasets across enterprise systems.
- Performed **data cleaning, transformation, and ETL on large datasets**; created Excel-based reports and identified opportunities for SQL-based automation to improve reliable data processing.
- Created a **step-by-step data migration reference guide** covering access steps, validation checks, and common error resolutions, which teammates adopted as a **go-to onboarding and troubleshooting resource**.

PROJECT HIGHLIGHTS:

E-commerce Conversion & Experimentation Analysis | PPT LINK

GA4 · BigQuery · SQL · Python · Experimentation

Analyzed **360K+ e-commerce sessions** to identify a **1.00 pp conversion gap** between new and returning users, then designed an **illustrative A/B testing framework** covering statistical and business significance.

Olist Marketplace Performance & Customer Experience | PPT LINK

SQL · Python · Multi-table Analysis · RCA

Analyzed **9 linked marketplace tables** to investigate delivery and customer-satisfaction patterns, identifying a **1.74-star review gap** between early/on-time and late deliveries and translating findings into operational priorities.

AWARDS:

- **Transformation Excellence Award:** Consero Global Solutions | 2024 — High-impact analytics automation delivery
- **Spot Award:** Consero Global Solutions | 2024 — Workflow optimization and accuracy

EDUCATION:

Bachelor of Engineering (B.E.) in Information Science — Aug 2016 to Aug 2020

Sai Vidya Institute of Technology — Bangalore, India
